

## SDM-504

Note Deposit & Recycle

A perfect combination of recycling and cash in functionality. A unique device for the retail with four recycling drums having a capacity up to 500 notes each, and with an innovative stacking bag for storing and collecting the money. The combination between cash-in and cash-out functionalities allows medium and small-size retailers to prepare the cashier start-of-the-day float in the morning and to make the deposit at the end of the day.

- The device can be integrated with coin handling devices
- Perfect to handle medium cash volumes, vouchers or cheques scanning
- Available with two different storage solutions: canvas bag or heat sealing bag
- Handles up to 5.000 banknotes, 2.000 of which in recycling, while still keeping the ease of use and a compact size of only 0,32 sq.m. footprint
- Insert stacking bags in transport boxes equipped with ink dye systems by the major manufacturers

# SDM-504 the Perfect Combination of Recycling and Cash in functionality

CashComplete™

## Perfect for medium cash volumes

SDM-504, in addition to the deposit function, handles up to 5.000 banknotes, 2.000 of which in recycling, while still keeping the ease of use and a compact size of only 0,32 sq.m. footprint. The upper plate is made up of an input slot that contains up to 30 banknotes at a time and an exit slot with a capacity up to 15 banknotes, of a plastic top hood, customizable in colour, of the authenticity validator BV5000, in compliance with the regulations of the main Central Banks. SDM 504 is perfect to handle medium cash volumes, vouchers or cheques scanning, with an input speed of 5.5 banknotes/sec. The combination between cash-in and cash-out functionalities allows medium and small-size retailers to prepare the cashier start-of-the-day float in the morning and to make the deposit at the end of the day.

## The device can be integrated with coin handling devices

A complete service to exchange money, to give the change in notes or coins.

## A user-friendly interface

Allows the operator to identify himself through Dallas key, pin code or card reader and to follow his own deposit on the touch screen, and then print the receipt.

## The device is available with two different storage solutions:

The high capacity canvas bag containing up to 4.000 notes free fall, locked by a cover with manual seal, and the disposable stacking heat-sealing bag containing up to 3.000 notes. In the stacking bag version the safe's opening is allowed just once it has completely sealed, thereby allowing the money collection by one individual operator, and no longer two according to the usual procedure, which results in a remarkable cost saving.

Unlike the free fall solution, notes are stacked in this bag, which further contributes to reducing the money processing costs at the cash center.

The note storage in disposal stacking bags allows to:

- remove the use of highly expensive, fragile and bulky cassettes (requiring a large storage room at the cash center, CIT vehicles and the customer's premises)
- remarkably speed up the money processing at the cash center, as notes are perfectly stacked
- insert stacking bags in transport boxes equipped with ink dye systems by the major manufacturers

## Specification SDM 504

Dimensions	455 (W) x 685 (D) x 1,015 (H) mm
Weight	250 kg (8mm steel) 370 kg (CEN L) 450 kg (CEN III, CEN IV)
Voltage/Frequency	90-240 V AC, 60-50 Hz
Power input process	200 W
Connections	Serial RS232, USB, Ethernet
Bill validator	Full-image sensor Authenticity in compliance with the regulations of the main Central Banks Possibility of multi-currency operation Possibility to handle cheques/tickets
Deposit speed	Up to 6 notes/s
Withdrawal speed	Up to 5 notes/s
User interface	58 mm Thermal printer Touch screen TFT a colori 7" PC Board Hard disk Dallas Key

## Options

- UPS
- Card reader
- Additional bags
- Bar code reader integrated

## Connectivity

The coin sorter has hardware ports ready for computer and interface for optimal connectivity.

-  ERP integration
-  Financial control
-  Report generation
-  Automated reconciliations
